

AI research, explained like you're *five*.

Aprecis turns every bleeding-edge AI paper into a swipeable card deck a curious beginner can finish in sixty seconds.

THE WALL

Anyone trying to keep up with AI hits the same wall.

Find a paper. Read a dense, jargon-heavy abstract written for peer reviewers. Decide if it's worth your time. Repeat fifty times to find one paper that matters. Most people give up, miss critical work, or fall back on what's trending on X.

01

Researchers

Drowning in 300+ new AI papers per day on arXiv. Triage time eats the day before any real reading starts.

02

Students & engineers

Want to learn the field. Hit a wall on the first paper. Bounce out before page 2 of the PDF.

03

PMs & founders

Need to understand what's actually possible, not what's hyped on Twitter. No time for full papers. No tolerance for marketing posts.

WHAT APRECIS DOES

Replace the abstract with a six-card deck.

Every paper is rewritten by our pipeline into a swipeable sequence: a one-line hook, the core idea, an ELI5, an everyday analogy, an interactive diagram you can poke, and a single takeaway. Default voice is plain English. Jargon is one tap away.

HOOK

Read both sides at once.

A computer that taught itself language by playing fill-in-the-blank, billions of times.

CORE IDEA

It plays the fill-in-the-blank game.

Take any sentence. Cover one word. Guess what was there. Repeat with every sentence on Wikipedia.

ELI5

"I poured ____ on my cereal."

You knew the word, didn't you? Probably milk. You used both sides of the blank. So does BERT.

INTERACTIVE

Try it yourself.

Mask a word. Watch the model rank its guesses. Swipe through six attention heads.

TAKEAWAY

It's already in your pocket.

Google search, autocomplete, smart reply. The same BERT-shaped model, quietly running.

THE MOMENT

Curiosity about AI just went mainstream. The literature didn't.

ChatGPT put hundreds of millions of people one step away from a research paper, then left them stranded at the abstract. Aprecis is the bridge.

300+

NEW AI PAPERS PER DAY

EXPERT CAN ACTUALLY
FINISH

IN THE APP

Three surfaces. One reading habit.

DISCOVER

Search any paper.
Open a deck.

Type the title or paste an arXiv URL. Apresic returns the deck, plus the Builds-on / Led-to graph so you can walk the lineage.

LEARN

Climb the roadmap
from Perceptron to GPT-3.

Eleven bespoke foundational lessons, then three branches: Vision, Language, Reasoning. Bottom-up vertical map, chronological, each paper builds on the one before.

PROFILE

Your library,
your progress.

Saved papers, reading streak, Plus membership, and the manage-subscription sheet — all native iOS, never bounces you to the App Store.

Pipeline is fully automated. Voice is hand-tuned.

Every 90 minutes our cron ingests new papers from arXiv, GitHub, RSS, and Twitter. A multi-stage LLM pipeline scores, deduplicates, and distills the survivors into card decks. End-to-end < 10 seconds per paper. The 11 foundational lessons are hand-authored in the same voice so the bar stays editorial.

STAGE 1

Ingest

arXiv + GitHub + RSS + Twitter. Score on recency, citations, social signal, keyword fit. Drop below 0.25.

STAGE 2

Headline + core idea

gpt-4o-mini extracts the one-line hook and the central mechanism. Author names stay out of the body.

STAGE 3

ELI5 + analogy + visual

Three parallel calls produce the plain-English layer, the everyday metaphor, and a structured visual DSL.

STAGE 4

Package

Cards rendered by native SwiftUI in iOS. No web views, no third-party charts. Pixel-honest typography.

A vertical roadmap. Start at Perceptron, climb to today.

Free readers progress one paper at a time. Apresic Plus members can skip ahead. After the Foundation trunk, three branches open: Vision (ViT to Segment Anything), Language (T5 to Mixtral), Reasoning (Chain-of-Thought to Reflexion).

Freemium subscription. The canon is free, forever.

We monetise depth and skip-ahead, never basic access. The Plus member is paying for triage speed across their backlog, not for content they couldn't otherwise find.

FREE · FOUNDATIONS

\$0

Forever. No card required.

- All 11 foundational lessons, full interactives
- 3 fresh paper decks per day
- First 3 cards of any paper, any time
- Save up to 10 papers to your library

PLUS

\$4.99_{/mo}

or \$39.99 / year · 7-day free trial

- Unlimited feed, full deck on every paper
- Skip ahead on the roadmap, any node, any time
- Unlimited saves and named collections
- Cross-device sync, Family Sharing, daily digest

WHERE WE ARE

Shipped. Built. Live in TestFlight.

SHIPPED**iOS app, end-to-end**

SwiftUI native, fully automated arXiv ingestion pipeline, 11 bespoke foundational lessons with hand-built interactive diagrams, premium-feel paywall with native StoreKit 2.

LIVE**TestFlight + landing**

App in closed beta on TestFlight. Landing page at aprecis.app with waitlist. Privacy policy + in-app account deletion shipped, App Store submission-ready.

NEXT 90 DAYS**Public launch + Plus monetisation**

App Store launch this quarter. Plus subscription activates 30 days post-launch. Server-side entitlement via App Store Server Notifications V2. Vision and Language branch content seeded.

WHAT WE WANT FROM THIS BATCH

Distribution, design partners, and a forcing function.

01

Distribution

Get Aprecis in front of the AI/ML community that already lives on X and Substack. Demo Day plus founder warm intros to research-adjacent publications.

02

Design partners

Five research labs or AI-curious companies to use Plus internally and tell us what to ship next. Real workflows, real feedback, fast iteration.

03

Forcing function

Three months of focus, founder community, and the relentless deadlines that turn a shipped app into a real product.
